

HIPS

Introduction

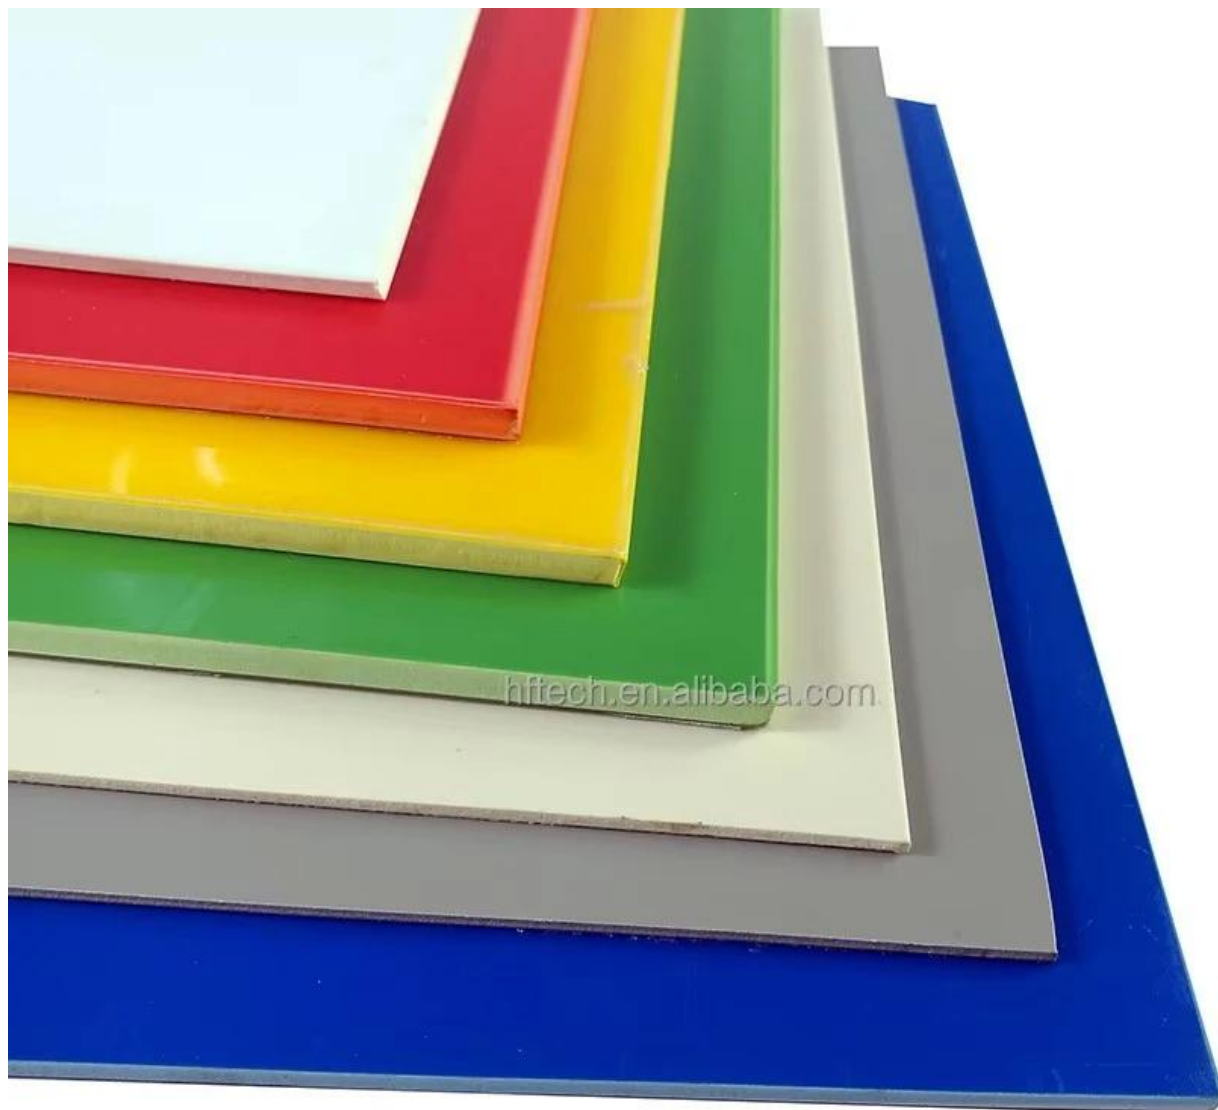

High-impact polystyrene is a product in which a small amount of polybutadiene is grafted onto a polystyrene matrix. It has an "island structure" in which the matrix is plastic and the dispersed phase is rubber. It has many characteristics:

1. High-impact polystyrene is a thermoplastic resin;
2. It is odorless, tasteless, a hard material, and has good dimensional stability after molding;
3. It has excellent high dielectric insulation;
4. It is a non-quality low-water absorption material;
5. It has good gloss and is easy to paint.
